

A Healthy School Year

Being back at school can be exciting for kids. New classrooms, new teachers and new friends can be fun. As the seasons change, you can help your child continue to enjoy the school year and be healthy. The more you understand your child's asthma and share with the school staff, the easier it is to manage your child's symptoms. This can help you prevent bad asthma attacks and keep your child healthy. Asthma does not have to control your child's life or future. There are things you can do every day to prevent asthma attacks.

Here are some tips to help your child stay healthy throughout the school year:

1. **Have an Asthma Action Plan.** Ask your healthcare provider for a written Asthma Action Plan to give to the school. This plan should tell school staff how to treat an asthma attack. It should also list the daily medicine your child takes to control his or her asthma. The healthcare provider may suggest that your child have extra medicine at school.
2. **Keep emergency phone numbers at school.** Make sure school has a list of things that may trigger your child's asthma.
3. **Be aware of changes in weather and seasons.** Let the school know if any of these changes may affect your child's asthma and cause an attack.
4. **Meet with school staff.** Invite the school nurse or fitness teacher to your meeting with your child's teacher. That way everyone knows the needs of your child. Take the Asthma Action Plan to this meeting.
5. **Keep a peak flow meter and rescue inhaler for your child at school.** Make sure that the inhaler has not expired.
6. **If your child needs an inhaler or other treatment before P.E. or gym class, let the teachers know.** Make sure that the medicine is on hand or that the school staff know where it is kept.
7. **If your child is going on a field trip make sure the teacher and other adults know the location of your child's medicine.**
8. **Talk with your child and make sure he or she understands the Asthma Action Plan.** Show your child where the teacher keeps the medicine to reduce worry.

Communicating with your child's school is important. Planning can help you and your child enjoy the school year.

Eat Healthier, Breathe Easier

For people with a lung disease, such as emphysema or Chronic Obstructive Pulmonary Disease (COPD), eating a balanced and healthy diet is important. Eating healthy can help you fight infections and prevent illness.

People who suffer from lung disease use a lot of energy to breathe. Some may use up to ten times the calories of a healthy person just trying to breathe. Proper nutrition helps to maintain the functions of the respiratory system and help with breathing.

Healthy Nutrition Tips:

- **Drink plenty of fluids.** This helps to keep your airways clear of mucus. If you have a heart problem, talk with your healthcare provider about your recommended fluid intake amount.
- **Control your salt intake.** Salt may keep fluids in your body. This may cause swelling and make breathing harder.
- **Limit caffeine.** Caffeine can interfere with some medicines. It may make you feel nervous.
- **Eat a variety of foods.** This will help you get the nutrients you need. Make sure to include fruits, vegetables, whole grains, protein, and dairy products.
- **Avoid overeating and foods that may cause gas and bloating.** These foods may include fried or greasy foods, apples, dried beans, broccoli, and cabbage.
- **Eat four to five small healthy meals a day.** Large meals can make you feel full. This may make it hard to breathe.
- **Eat your main meal early in the day.** This may give you more energy during the day.
- **Choose healthy foods that are easy to fix.** Save your energy for eating. Make extra food and freeze it for quick meals.
- **Use your oxygen during meals (if you use oxygen).** Your body needs energy to eat and digest foods. This requires more oxygen.

Eating healthy can help you breathe easier and feel better. Talk to your healthcare provider about special dietary needs.

Quest Lab Announcement

Molina Healthcare has chosen Quest Diagnostics as our preferred laboratory provider. As of July 1, 2011, you can use Quest Diagnostics for lab work. Quest Diagnostics has several locations in Missouri. You can make an appointment online to shorten your wait time. To learn more, please visit our website at www.MolinaHealthcare.com or call Member Services at 1-800-875-0679.

Keeping Track of Your Medicines Can Help You Stay Healthy

If you take medicine every day, it is easy to lose track. You may find yourself asking, “Did I take it this morning or was that yesterday?” It is easy to get confused. Some medicines must be taken at different times from others. Some must be taken with food and some on an empty stomach. Some even require self-testing before taking them. Taking your medicines correctly is important.

Molina wants to help you take your medication as prescribed by your healthcare provider. Please consider making a checklist to help you with your medicines.

Making a Medication Checklist

Making a medication checklist is easy and only takes a few minutes. Simply write down each medicine you take, along with the time of the day you should take it. Write down any special instructions. Include self-testing that needs to be done for that medicine (for example, blood sugar testing for insulin). Make a new list each week or make photocopies. Be sure to take your lists with you to your next health care appointment, along with your medicine bottles.

An example of a checklist you might make is below (showing two days of the week):

Week of: November 20th

Medications	Instructions	Sun	Mon
Metformin 500 mg tablet	Take one tablet twice a day with food	<input checked="" type="checkbox"/> 8am <hr/> <input checked="" type="checkbox"/> 5pm	<input checked="" type="checkbox"/> 8am <hr/> 5pm
Simvastatin 40 mg tablet	Take one tablet every night at bedtime	<hr/> <hr/> 9 am	<hr/> <hr/> 9 am

Using a Medication Checklist

Write the date at the top of each new checklist. Then check off medicines as you take them. If you are late taking a medicine, write down the time you actually took it. That way you will always know if you have taken your medicines. This information will help your healthcare provider know if your medicines are doing what they should.

Molina is here to help! We have additional resources to assist you:

Are You Prepared to Beat the Flu Bug?

If you have a chronic condition such as asthma or COPD, you are at a higher risk for flu complications.

Here are simple steps you can take to reduce your risk for getting the flu:

- Get the flu shot every year
- Don't touch your face
- Wash your hands often
- Avoid people who are sick

If you have the flu, here are some of the symptoms you may feel:

- Fever between 100-104°F and chills
- Fatigue and weakness
- Headache, aches and pains
- Chest discomfort, sneezing and cough

The best thing to do when you get the flu is to stay home and get plenty of rest.

Below are some treatment options for flu symptoms:

- Over-the-counter medicines can help to reduce fever, aches, pains, stuffy nose, and sneezing. Talk to your pharmacist or healthcare provider.
- Get plenty of rest
- Drink plenty of fluids

Remember, the flu is a virus. This means antibiotics will not cure it. For more information about the flu, call our 24-Hour Nurse Advice Line at 1-888-275-8750 (TTY: 1-866-735-2929).

Quit for Good

If you have not quit smoking, do it now! It is not too late to improve your quality of life and slow the progress of lung disease. It is the best thing you can do to live well with asthma or COPD. Quitting may be the hardest, but the most rewarding, thing you will ever do.

Nicotine is very addictive and people often try to stop two or three times before quitting for good. Studies have shown each time you quit you become stronger and learn more about what it takes to quit for good.

Molina Healthcare of Missouri members can receive stop smoking help through the MO HealthNet Pharmacy Benefit Program at no cost. For more information, please call the MO HealthNet Participant Services Unit at 1-800-392-2161.

The Missouri Tobacco Quitline is also available to you by calling 1-800-QUIT-NOW (1-800-784-8669). The Quitline offers telephone counseling and resource materials at no cost. Call today!

Know When to Get the Help You Need for COPD

Chronic Obstructive Pulmonary Disease (COPD) means you have chronic bronchitis, emphysema or both. People with COPD have trouble breathing. It is important to know when your symptoms are worse than normal. It is also important to know when to call your healthcare provider.

Call your healthcare provider if any of the following occur:

- Shortness of breath or wheezing increases and is quickly getting worse
- Coughing deepens or increases
- Mucus (sputum) you cough up changes in the color or increases

- Coughing up blood
- Swelling in your legs or stomach increases
- Signs of an infection (such as high fever or feeling poorly) develop
- Flu-like symptoms develop
- Your medicine is not working as well as usual

Do not wait until your symptoms get worse. Call your healthcare provider right away for help. You can also call Molina's 24-Hour Nurse Advice Line if you have questions about your symptoms or health care. Call 1-888-275-8750 (TTY: 1-866-735-2929). Nurses are there to take your call 24 hours a day, seven days a week.

Managing Feelings about Asthma

You may be at risk for depression if you have a chronic illness such as asthma. Difficulty breathing due to poorly managed asthma can be stressful. This emotional stress can lead to depressive feelings. It can worsen asthma symptoms.

Signs and symptoms of depression may include feeling sad or blue for two weeks or more. You may lose all interest or pleasure in things you had once enjoyed. You may lose or gain weight. You may have changes in your diet, exercise or sleep.

Depression affects up to 12 percent of all men and up to 25 percent of all women. Depression is more common in people with asthma. About 20 to 50 percent of people with asthma suffer from depression.

These steps may help improve your breathing and decrease your risk of depression:

- Visit your healthcare provider regularly. Your provider will check your breathing. Your provider can help decide if you need further treatment.
- If your asthma is poorly controlled, talk with your healthcare provider about changing your asthma medicine or dosage.

- Ask your healthcare provider about any possible side effects of your asthma medicine.
- Be sure to take your asthma medicine correctly and as prescribed.
- Have and follow an Asthma Action Plan.
- Be active. When asthma is well controlled, being physically active can help improve your overall health and mood.

You may need to talk to a behavioral healthcare provider, if you are having any of the following:

- Difficulty accepting your illness
- Feeling a loss of control over your body or life habits
- Feelings of anger, sadness, helplessness, or hopelessness that do not go away

Depression is a serious medical condition. Depression may lead to suicidal thoughts or actions. Depression may make taking your medicine on time harder. It may also make eating and being active harder for you.

For help finding a behavioral health provider, please call 1-800-642-3694. For more information or transportation assistance, please call Molina Member Services at 1-800-875-0679.
