

Molina Healthcare's *new* EZ Rx Report is designed to help you understand which medications DO NOT require prior authorizations (PA) for your Molina Medicaid and MICHild patients. Providers who wish to prescribe non-formulary drugs must complete Molina Healthcare's Prior Authorization form and fax to 1-888-373-3059. The PA form is available online at www.molinahealthcare.com

No PA Required - Omeprazole 20 mg Capsule

Molina Healthcare is now using omeprazole 20 mg capsules (prescription version) as the preferred omeprazole product. When providers write for this product there is NO PA or paperwork required. Prescriptions for the OTC (over the counter) version and all other PPI (proton pump inhibitor) products require PA. Therefore, when a PPI is needed, please consider using omeprazole 20 mg capsules for your patients.

No PA Required - ProAir[®] HFA

Molina Healthcare is using ProAir[®] HFA (albuterol) as the preferred short acting beta agonist. When providers write for this product, there is NO PA or other paperwork required. Members can only fill one ProAir[®] HFA inhaler per month. Therefore, when your patient requires a short acting beta agonist, please consider ProAir[®] HFA. All other albuterol products require a PA.

No PA Required - Fluticasone Nasal Steroid

Molina Healthcare requires an adequate trial of generic Flonase[®], also known as fluticasone, before any other products will be approved. When providers write for fluticasone there is NO PA or other paperwork required. Therefore, when your patients require treatment with a nasal steroid, please consider fluticasone. All other nasal steroids require a PA.
