## Chronic Diagnosis | QuickCoder

*This poster provides examples of chronic illness and/or disability diagnoses codes. It also illustrates best practices for physicians and medical billing staff to code ICD-9-CM diagnosis codes on CMS-1500 Claim forms to the highest level of specificity. The Chronic Illness and Disability Payment System (CDPS) is a payment system Medicaid programs can use to make health-based capitated payments for disabled Medicaid beneficiaries. It is important to note that the codes listed are not all inclusive and should not be considered as a definitive list of conditions chronically ill or disabled patients can present with after thorough examination from their physician. The thorough understanding of the components of a comprehensive chronic illness care plan is the aim of Molina Healthcare of Washington to help individuals maintain the highest possible quality of life.*

### Chronic Disease and Disability Payment System Information

**The Chronic Disease and Disability Payment System (CDPS) uses diagnoses from both ambulatory and inpatient encounter data.**

- CDPS organizes diagnoses into 20 major categories, which correspond to body systems and types of diagnoses
- Each diagnosis category and subcategory is assigned a payment weight
- The higher the acuity, the higher the payment weight

**What can Molina Healthcare PCPs do to help?**

- Encourage your patients to come in for office visits
  - Welcome Postcards, Calls, Reminder cards
  - Aged, Blind or Disabled (ABD) members should be seen at least 2 to 4 times per year

- Submit accurate and timely encounters for every office visit
  - For members with chronic illness, always report the chronic illness on the claim form
  - Be specific on diagnosis coding, ill-defined diagnoses receive NO points in the CDPS scoring
  - Your claims must be submitted according to Washington Uniform Billing Guidelines

***Beware of super bills populated with non-specific diagnosis codes***
