## Nulojix (belatacept)

### PRODUCTS AFFECTED

Nulojix (belatacept)

### COVERAGE POLICY

*Coverage for services, procedures, medical devices, and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.*

*This Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide Molina Healthcare complete medical rationale when requesting any exceptions to these guidelines*

#### **Documentation Requirements:**

*Molina Healthcare reserves the right to require that additional documentation be made available as part of its coverage determination; quality improvement; and fraud; waste and abuse prevention processes. Documentation required may include, but is not limited to, patient records, test results and credentials of the provider ordering or performing a drug or service. Molina Healthcare may deny reimbursement or take additional appropriate action if the documentation provided does not support the initial determination that the drugs or services were medically necessary, not investigational, or experimental, and otherwise within the scope of benefits afforded to the member, and/or the documentation demonstrates a pattern of billing or other practice that is inappropriate or excessive*

#### **DIAGNOSIS:**

prophylaxis of organ rejection

#### **REQUIRED MEDICAL INFORMATION:**

*This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. If a drug within this policy receives an updated FDA label within the last 180 days, medical necessity for the member will be reviewed using the updated FDA label information along with state and federal requirements, benefit being administered and formulary preferencing. Coverage will be determined on a case-by case basis until the criteria can be updated through Molina Healthcare, Inc. clinical governance. Additional information may be required on a case-by-case basis to allow for adequate review*

#### **PLEASE CONSULT TRANSPLANT TEAM FOR COORINDATION OF APPROVALS**

##### **A. PROPHYLAXIS OF ORGAN REJECTION pre-TRANSPLANT:**

1. Documentation of history of renal transplant or scheduled transplant within the next 14 days.  
AND
2. Documentation member is Epstein-Barr virus (EBV)- seropositive  
AND
3. Documentation member is using in combination with basiliximab induction, mycophenolate mofetil and corticosteroids

## Drug and Biologic Coverage Criteria

AND

4. Documentation member was evaluated for tuberculosis and treatment (if needed) for latent infection was initiated prior to Nulojix
- AND
5. For patients continuing therapy after inpatient- See transplant team approval-PROVIDE REFERRAL DATA

### CONTINUATION OF THERAPY:

#### A. PROPHYLAXIS OF ORGANREJECTION:

1. Documentation member is responsive to therapy demonstrated by no signs or symptoms of acute/chronic kidney rejection

### DURATION OF APPROVAL:

Initial authorization: 6 months, Continuation of therapy: 12 months

### PRESCRIBER REQUIREMENTS:

Prescribed by or in consultation with a transplant specialist or nephrologist. Consultation notes required. [If prescribed in consultation, consultation notes must be submitted within initial request and reauthorization requests]

### AGE RESTRICTIONS:

18 years of age or older

### QUANTITY:

At the initial phase, Nulojix should be dosed at 10 mg/kg IV on day 1 (day of transplant, prior to implantation), day 5, and end of weeks 2, 4, 8, and 12. Dose at 5 mg/kg at end of week 16 and every 4 weeks thereafter

Conversion from calcineurin inhibitor (off-label dosing) (Grinyo 2012; Grinyo 2016; Rostaing 2011): IV: Initial phase: 5 mg/kg on transition days 1, 15, 29, 43, and 57, Maintenance phase: 5 mg/kg every 4 weeks beginning 4 weeks after completion of the initial phase. Note: Taper calcineurin inhibitor dose slowly over 1 month (no reduction on day 1, 40% to 60% reduction on day 15, 70% to 80% reduction on day 23; discontinue on day 29 and beyond).

### PLACE OF ADMINISTRATION:

The recommendation is that infused medications in this policy will be for medical benefit coverage administered in a place of service that is a non-hospital facility-based location as per the Molina Health Care Site of Care program.

**Note:** Site of Care Utilization Management Policy applies for Nulojix (belatacept). For information on site of care, see

[Specialty Medication Administration Site of Care Coverage Criteria \(molinamarketplace.com\)](https://www.molinamarketplace.com/specialty-medication-administration-site-of-care-coverage-criteria)

## DRUG INFORMATION

### ROUTE OF ADMINISTRATION:

Intravenous

### DRUG CLASS:

Selective T-Cell Costimulation Blockers

### FDA-APPROVED USES:

indicated for prophylaxis of organ rejection in adult patients receiving a kidney transplantation in combination with basiliximab induction, mycophenolate mofetil, and corticosteroids.

Limitations of use:

## Drug and Biologic Coverage Criteria

Use NULOJIX only in patients who are EBV seropositive

Use of NULOJIX for the prophylaxis of organ rejection in transplanted organs other than kidney has not been established

### COMPENDIAL APPROVED OFF-LABELED USES:

None

## APPENDIX

### APPENDIX:

None

## BACKGROUND AND OTHER CONSIDERATIONS

### BACKGROUND:

Nulojix powder, lyophilized, for solution for Intravenous injection; a selective T-cell co stimulation blocker indicated for prophylaxis of organ rejection in adult patients receiving a kidney transplant. It is used in combination with basiliximab induction, mycophenolate mofetil, and corticosteroids. Some limitations of use are that it can only be used in patients who are EBV seropositive, and its safe use has not been established for the prophylaxis of organ rejection in transplanted organs other than the kidney. Nulojix should never be used in patients with unknown serostatus or EBV seronegative. Use in patients with history of liver transplant is not recommended and only physicians experienced in immunosuppressive therapy and management of kidney transplant patients should prescribe Nulojix. See table 1 below for dosing recommendation. Doses higher than or more frequent than recommended should be avoided due to the increased risk of infection or malignancy. It should only be administered intravenously over a 30-minute period and only the silicone-free disposable syringe enclosed in the package should be used for administration.

Nulojix comes with boxed warning for Post-transplant lymphoproliferative disorder (PTLD), other malignancies, and serious infections. There is an increased risk for Progressive Multifocal Leukoencephalopathy (PML) with Nulojix. Corticosteroid utilization should be consistent with Nulojix clinical trial experience as acute rejection and graft loss might result with corticosteroid minimization. In the Belatacept Evaluation of Nephroprotection and Efficacy as First-line Immunosuppression Trial (BENEFIT), 686 recipients of a living or standard-criteria deceased donor kidney transplant were randomly assigned to more intensive (MI) belatacept, less intensive (LI) belatacept, or cyclosporine, in conjunction with mycophenolate and glucocorticoids; all patients received basiliximab as induction therapy [126,128,131,132,134,137]. At 12 months, patients treated with belatacept experienced a higher incidence and grade of acute rejection episodes (22 and 17 versus 7 percent in the MI, LI, and cyclosporine arms, respectively) but had superior renal function, a benefit that was sustained at seven years posttransplant (estimated glomerular filtration rate [eGFR] of 70 and 72 versus 45 mL/min/m<sup>2</sup>, respectively). In addition, rates of death or allograft loss were significantly lower at seven years in patients assigned to belatacept (12.7 and 12.8 versus 21.7 percent). Posttransplant lymphoproliferative disorder (PTLD) was more common with belatacept, particularly among EBV- seronegative patients.

The BENEFIT-EXT trial compared the efficacy and safety of belatacept with that of cyclosporine in extended criteria donor (ECD) kidney transplant recipients, using the same study design as the one used in BENEFIT [127,128,130,133,138]. At 12 months, acute rejection rates were similar between groups. Similar to BENEFIT, patients treated with belatacept had better renal function at one, two, five, and seven years compared with those treated with cyclosporine. Rates of PTLD were also higher among patients treated with belatacept.

A randomized, controlled trial compared belatacept with a tacrolimus-based, steroid-avoiding

## Drug and Biologic Coverage Criteria

maintenance immunosuppression regimen [129]. Recipients of living and deceased donor renal allografts were randomly assigned to treatment with belatacept-mycophenolate mofetil (belatacept-MMF), belatacept- sirolimus, or tacrolimus-MMF. All patients received induction with rabbit antithymocyte globulin (rATG)- Thymoglobulin and a short course of glucocorticoids. Acute rejection rates were highest in the belatacept- MMF arm (12 percent), and the calculated GFR was 8 to 10 mL/min higher with either belatacept regimen than with tacrolimus-MMF.

Another randomized, controlled trial of 40 kidney transplant recipients compared belatacept with a tacrolimus-based, steroid-containing maintenance regimen [139]. Patients were randomly assigned to belatacept or tacrolimus, combined with MMF and prednisolone; all patients received basiliximabas induction therapy. At one-year posttransplant, the incidence of acute rejection was higher among patients who received belatacept compared with those who received tacrolimus (55versus 10 percent, respectively). Graft loss, due to rejection, occurred in three patients, all in the belatacept group. There was no difference in graft function between the two groups.

### CONTRAINDICATIONS/EXCLUSIONS/DISCONTINUATION:

All other uses of Nulojix (belatacept) are considered experimental/investigational and therefore, will follow Molina's Off-Label policy. Contraindicated in transplant recipients who are Epstein-Barr virus (EBV) seronegative or with unknown EBV serostatus due to the risk of post-transplant lymphoproliferative disorder (PTLD), predominantly involving the central nervous system (CNS)

### OTHER SPECIAL CONSIDERATIONS:

Boxed warning for post-transplant lymphoproliferative disorder, other malignancies, and serious infections

## CODING/BILLING INFORMATION

*Note: 1) This list of codes may not be all-inclusive. 2) Deleted codes and codes which are not effective at the time the service is rendered may not be eligible for reimbursement*

HCPSC CODE	DESCRIPTION
J0485	injection, belatacept 1mg
