### I. PURPOSE

Indications for determining medical necessity for Percutaneous Left Atrial Appendage Closure.

### II. DEFINITIONS

Patients with atrial fibrillation (AF), an irregular heartbeat, are at an increased risk of stroke. The left atrial appendage (LAA) is a tubular structure that opens into the left atrium and has been shown to be one potential source for blood clots that can cause strokes. While thinning the blood with anticoagulant medications has been proven to prevent strokes, percutaneous LAA closure (LAAC) has been studied as a non-pharmacologic alternative for patients with AF.

CHADS2 score  $\geq 2$  (Congestive heart failure, hypertension, age  $> 75$ , diabetes, stroke/transient ischemia attack/thromboembolism) or CHA2DS2-VASC score  $\geq 3$  (Congestive heart failure, hypertension, age  $\geq 65$ , diabetes, stroke/transient ischemia attack/thromboembolism, vascular disease, sex category).

Appropriate Use Criteria (AUC score) for a service is one in which the expected incremental information, combined with clinical judgment, exceeds the expected negative consequences by a sufficiently wide margin for a specific indication that the procedure is generally considered acceptable care and a reasonable approach for the indication. The ultimate objective of AUC is to improve patient care and health outcomes in a cost-effective manner but is not intended to ignore ambiguity and nuance intrinsic to clinical decision making.

Appropriate Care- Median Score 7-9

May be Appropriate Care- Median Score 4-6

Rarely Appropriate Care- Median Score 1-3

### III. POLICY

#### Indications for approving a request for medical necessity:

- A. Patients with non-valvular Atrial Fibrillation with CHADS2 score greater than or equal to 2 (Congestive heart failure, hypertension, age greater than 75, diabetes, stroke/transient ischemia attack/thromboembolism) or CHA2DS2-VASC score greater than or equal to 3 (Congestive heart failure, hypertension, age greater than or equal to 65, diabetes, stroke/transient ischemia attack/thromboembolism, vascular disease, sex category) or high HAS-BLED score (Hypertension, abnormal renal function, and/or liver function, stroke, prior bleeding, labile anticoagulation range, elderly age greater than 65, drug therapy such as antiplatelet drugs) and is deemed unable to tolerate long term anticoagulation. **(AUC Score 5)**<sup>1,2</sup>

#### Limitations

- A. Requests for services that are part of a surveillance protocol for patients who are involved in a clinical trial are considered out of scope (OOS) for New Century Health and cannot be reviewed.

### IV. PROCEDURE

- A. In order to review a request for medical necessity, the following items must be submitted for review
  - 1. Progress note that prompted request from Electrophysiologist/Interventional Cardiologist/Cardiologist
- B. Primary code appropriate for this service: 33340
- C. Place/Site of Service: Inpatient hospital (21)

### V. APPROVAL AUTHORITY

- A. Review – Utilization Management Department
- B. Final Approval – Utilization Management Committee

### VI. ATTACHMENTS

- A. None
