

Attention EVV Providers:

Effective Aug. 1, 2019, the enhanced DataLogic FTE edits will be enabled for program providers delivering managed care services to Molina members, as well as other MCOs.

Molina currently has visit data rejection processing in place, **the only edits that will be enabled effective Aug. 1, 2019 are the DataLogic FTE edits.**

DataLogic will continue to operate business as usual with Molina by sending the visit data to the MCOs once cleared by the enhanced FTE edits and report any rejections from the payer to the program provider. The visit data will not be subject to the new EVV Aggregator rejection edits until go-live on Sept. 1, 2019 to avoid conflicts with the rejection processing currently being done by Molina.

The FTE edits will execute in the DataLogic Vesta EVV system prior to transmission of the visit data to the payers. All results of the edits will be visible to the program provider and MCOs through the normal reporting processes of DataLogic Vesta.

Additional Information: As a reminder the entire set of edits (FTE and Aggregator rejections) are currently in production for visit data associated with EVV services in:

- Fee-for-Service services in Long-Term Care and Acute Care
- Managed care services delivered by program providers to members of the following MCOs: Aetna, Cigna, Cook Children's, Children's Medical, and Driscoll.

Further communication regarding this release will be posted prior to the implementation date of Aug. 1, 2019. If you have questions, please contact your Provider Services Representative or email MHTXEVV@MolinaHealthcare.com.
