Readmission Payment Policy

Payment Policy: 30-Day Readmissions

This payment policy provides guidance regarding reimbursement and is not intended to address every situation. In instances that are not addressed by this policy, by another policy, or by contract, Molina Healthcare retains the right to use discretion in interpreting this policy and applying it (or not applying it) to the reimbursement of services provided. The provider is responsible for submitting complete, accurate, and timely claims and medical records for payment consideration.

**POLICY**

This policy applies to Medicaid, Marketplace and MyCare Ohio Medicare-Medicaid Lines of Business

Definition: A preventable readmission (PR) is an inpatient admission that follows a prior discharge from a hospital within 30 days that is deemed clinically related and clinically preventable to the initial admission.

Upon receipt of an inpatient authorization request, Molina’s clinical staff will review for both a medical necessity determination and for identification of a readmission which may be potentially preventable during a 30-day look-back period (Discharge Date to Admit Date). At the point of an inpatient authorization determination for medical necessity, if it is identified as a potentially preventable readmission, a notification will be sent to the provider via fax indicating that the stay was identified as a potentially preventable readmission. This notification will be sent to the provider with the communication of the medical necessity determination.

A medical director reviews the clinical information associated with an identified potentially preventable readmission to identify avoidable and unnecessary care which will deem the readmission as clinically preventable and therefore a PR. This emphasis on preventable events gives focus on areas of opportunity that will have the greatest impact on improved patient care while decreasing unnecessary readmits.

The following criteria is utilized in the determination of a PR:

1) A readmission is a return hospitalization within 30 days of a prior discharge that meets the following criteria:
   a) The readmission is preventable by the provision of appropriate care consistent with accepted care standards related to the prior discharge, or during the post-discharge follow-up period.
   b) The readmission is for a condition or procedure that is clinically related to the care provided during the prior hospitalization or resulting from incomplete discharge planning.
   c) The PR sequence may contain one or more readmissions that are clinically related to the initial admission. If the first readmission is within 30 days after the
initial admission, the 30-day timeframe may begin again at the discharge of either the initial admission or the most recent readmission clinically related to the anchor admission.

d) The readmission is to the same hospital.

EXCLUSIONS

Molina’s process excludes the following services from readmission review:

- Transfers from out-of-network to in-network facilities;
- Transfers of patients to receive care not available at the first facility or unit;
- Readmissions that are planned for repetitive or staged treatments (i.e., cancer chemotherapy or surgical procedures);
- Readmissions associated with malignancies, burns or cystic fibrosis;
- Admissions to Skilled Nursing Facilities, Long Term Acute Care Facilities and Inpatient Rehabilitation Facilities (SNF, LTAC, and IRF);
- Readmissions where the anchor admission had a discharge status “left against medical advice” (The claim submission must include this status (AMA) for processing);
- Obstetrical readmissions;
- Transplant-related readmissions;
- Infants less than 12 months of age on the date of service;
- Readmissions ≥ 31 days from the date of discharge from the anchor admission.

In addition to the exclusions noted above, the following is excluded from readmission reviews for the MyCare Ohio members only:

- Behavioral health

CLAIM PROCESSING

Molina will review a claim at the time of receipt to determine if it meets the PR criteria set forth in this document.

If a claim meets criteria for a PR, it will be denied and the provider will receive an explanation of payment stating that the claim was determined to be a preventable readmission. The provider may follow the claim reconsideration process to provide the additional supporting clinical documentation for the anchor discharge and readmission.

A qualified clinician will review the clinical information provided to determine if any readmission was inappropriate, unnecessary, or preventable based on the above guidelines. If a readmission is determined to be inappropriate, unnecessary, or preventable, written notification of such a determination will be sent to the hospital. Claims dispute timelines will apply.
If the readmission is determined to be within PR criteria, the claim for the readmission will be denied. The two admissions cannot be combined, and the payment for the anchor admission will be considered payment in full.

If the anchor claim was denied, or processed as an outpatient service or observation, then the second admission will no longer be considered a readmission and will be processed based on medical necessity and standard processing guidelines.

**DEFINITIONS**

Clinically Related – An underlying reason for a subsequent admission that is plausibly related to the care rendered during or immediately following a prior hospital admission. A clinically related readmission may have resulted from the process of care and treatment during the prior admission (e.g., readmission for a surgical wound infection) or from a lack of post admission follow-up (e.g., lack of follow-up arrangements with a primary care physician) rather than from unrelated events that occurred after the prior admission (e.g., broken leg due to trauma) within a specified readmission time interval.

Anchor Claim or Anchor Admission – The first inpatient admission and the related claim for services at an acute, general or short-term hospital and for which the date of discharge for such admission is used to determine whether a subsequent admission at that same hospital occurs within 30 days.

Potentially Preventable Readmission (PPR) – A potentially preventable readmission is a readmission (re-hospitalization within a specified time interval) that is identified through a process including review by Molina staff and the use of the 3M™ Health Information System Division PPR Measure based on the Ohio Department of Medicaid’s customization, when applicable.

Preventable Readmission (PR) – A preventable readmission (PR) is an inpatient admission that follows a prior discharge from a hospital within 30 days that is deemed clinically related and clinically preventable to the initial admission.

Readmission – An admission to a hospital occurring within 30 days of the date of discharge from the same hospital. Intervening admissions to non-acute care facilities (e.g., a skilled nursing facility) are not considered readmissions and do not affect the designation of an admission as a readmission.
